

Wireless PBX200

Model WPBX200

WaveTramp's WPBX200 product integrates PBX, GSM/CDMA wireless access, SMS platform and wireless data four core functions into one device. It helps the end customers to save their monthly calling bill through Least Cost Routing (LCR) and integrated services.

The device offers all major PBX functions, it can also used as a mobile extension to VOIP Gateway so that calls from VOIP gateway can be routed into GSM/CDMA network.

The unique modular design makes the product 3G ready. To support 3G network, the end user only need to replace the system board with a new board with 3G chipset.

The device is primarily deployed in Small and Medium size Enterprise (SME), Hotels and Resorts.
